CONTENTS

	PAGE
General introduction and aim of the work	1
Methods	
A - Physical investigations	
1 - Determination of total soluble ions and,Hydrogen ion concentration.	4
2 - Moisture percentage.	4
3 - Determination of fibre percentage.	4
4 - Determination of lipid Percentage.	5
5 - Determination of Nitrogen percentage.	6
6 - Determination of Ash percentage.	7
7 - Determination of Carbohydrate percentage.	7
8 - X-ray fluorescence.	9
9 - Determination of trace elements using atomic absorption spectrophotometer.	9
B - Chemical investigations	
1 - Extraction.	10
2 - Infra Red absorption spectrophotometer.	10
3 - Fractionation of water extracts.	11
4 - Chromatography :	
A - Paper chromatography.	11
B - Thin layer chromatography.	12
C - Spray reagents used during this work.	13
5 - Gas chromatography :	
A - separation and identification of Carboxylic acids by GLC.	15
B - separation and identification of sugar by GC.	16

C - separation and identification of fatty acids and Hydrocarbons by GC.	
a - The GC conditions for hydrocarbon fraction.	17
b - The GC conditions for fatty acids methyl; esters.	18
6 - Amino acids determination using Amino acid analyzer.	20

RESULTS AND DISCUSSION

SECTION I

Predicted beer and wine residues.

Introduction. 23

A - The predicted beer residues :

 a - Site. 27

 b - Material. 31

 c - Results.

 1 - Sample ingredients. 34

 - pH and total soluble ions. 34

 - Quantitative determination of inorganic elements. 36

 - Quantitative determination of some inorganic elements. 36

 - Major sample ingredients. 37

 2 - Infra Red spectroscopy. 45

 3 - Quantitative determinations of amino acids. 48

 4 - Gas chromatography for Quantitative determination of :

 - Sugars. 48

 - Carboxylic acids. 50

 - Fatty acids. 54

 - Hydrocarbons 54

3 - The predicted wine residues.

 a - Site. 57

 b - Material. 60

c - Results.	
1 - Sample ingredients.	
- pH and total soluble ions.	62
- Quantitative determination of inorganic elements.	62
- Quantitative determination of some inorganic elements.	62
- Major sample ingredients.	64
2 - Infra Red spectroscopy.	64
3 - Quantitative determinations of amino acids.	69
4 - Gas chromatography for Quantitative determination of :	
- Sugars.	71
- Carboxylic acids.	71
- Fatty acids.	73
- Hydrocarbons	73

C - Discussion.	78
-----------------	----

SECTION II

Coptic period samples.

Introduction.	87
---------------	----

1 - Site.	89
-----------	----

2 - Material.

3 - Results and discussion.	89
-----------------------------	----

A - Predicted food residues.

a - Results.

1 - Infra Red spectroscopy.	92
-----------------------------	----

2 - Gas chromatography for quantitative determination of :

- Hydrocarbons.	101.
-----------------	------

- Fatty acids.	101
----------------	-----

b - Discussion.	109
-----------------	-----

B - The chemical finger prints of the food residues on its empty pottery containers.

SUMMARY	a - Results.	
	1 - Infra Red spectroscopy.	113
APPENDICES	2 - Gas chromatography for quantitative determination of :	
	Hydrocarbons.	116
	Fatty acids.	116
REFERENCES	b - Discussion.	123

SECTION III

Intact Cereal grains and the time lapse.

	Introduction.	125
	1 - Site.	
	a - Abu Shaar.	127
	b - Gabel El Zeit.	130
	2 - Material.	131
	3 - Results.	
	1 - Infra Red spectroscopy.	
	i - <u>Hordeum vulgare</u> . (Barley)	133
	ii - <u>Triticum dicoccum</u> . (Wheat)	137
	2 - Gas chromatography for quantitative determination of :	
	- Hydrocarbons.	
	i - <u>Hordeum vulgare</u> .	137
	ii - <u>Triticum dicoccum</u> .	142
	- Fatty acids.	
	i - <u>Hordeum vulgare</u> .	142
	ii - <u>Triticum dicoccum</u> .	145

4 - Discussion.	150
SUMMARY AND CONCLUSION	153
APPENDICES	
I - Chemical Appendix.	157
II - IR Appendix.	162
REFERENCES	165
